

150g Hainan Wild Agarwood Aloeswood Natural Scraped Black Oil Bulk Spices Insect Authentic

Our Product Introduction

Basic Information

- Place of Origin: CHINA
- Brand Name: LONGSHENG
- Certification: ISO
- Minimum Order Quantity: 10g
- Packaging Details: other
- Delivery Time: 1~3work daiy
- Payment Terms: L/C, D/A, D/P, T/T, Western Union, MoneyGram
- Supply Ability: 10000/month

Product Specification

- Brand: Longsheng
- Model: 546723112
- Fragrance: Experience Pack: 50g [canned], 150g [canned], 250g [self-sealing Bag], 1kg [self-sealing Bag], 5kg [self-sealing Bag]
- Efficacy: Calming And Helping Sleep
- Origin: China
- Ingredients: Agarwood
- Weight (g): 150g
- Packaging Type: Canned
- Product Category: Agarwood
- Color Classification: Indonesia Irian Agarwood [100 Mesh Fine Powder] Log Grinding
- Highlight: agarwood aloeswood natural,
150g agarwood powder,
150g agarwood aloeswood

Product Description

Authentic Hainan wild agarwood spices sinking logs old materials agarwood natural scraped black oil bulk spices insect leaks

1. The formation of worm holes As the name suggests, worm holes refer to the injuries of agarwood trees during their growth due to the gnawing of insects and ants. In order to heal these wounds, agarwood trees secrete resin to wrap the injured parts. Over time, these resins gradually accumulate and harden, forming what we call "worm holes". Insects and ants build nests in agarwood trees, and their irregular gnawing makes the shapes of worm holes colorful and different, each of which is a masterpiece of nature.

2. Characteristics of worm holes

Unique fragrance: The fragrance of worm-leaked agarwood is clear and sweet, restrained and steady, elegant and sweet, and rich in layered changes. This is probably because after the insects and ants gnawed the tree body, the resin accumulated in the gaps of the wormholes, forming a thick knot of incense around it. Peculiar shape: The appearance of worm-leaked agarwood is rich and varied, some look like mountains, some look like pen holders, etc., and they look very beautiful. Unlike the block-shaped incense knots of ordinary agarwood, worm-leaked agarwood is more artistic and ornamental.

Rare and precious: Since the formation of worm-leaking agarwood requires specific natural conditions and long-term accumulation, its output is rare, and each piece is a natural treasure. In particular, Hainan worm-leaking agarwood is highly valued for its unique growth environment and high quality.

3. Characteristics of Hainan worm-leaking agarwood As a type of worm-leaking agarwood, Hainan worm-leaking agarwood has its own unique features. First of all, Hainan is located in the tropics, with a warm and humid climate, which provides unique conditions for the growth of agarwood trees. Secondly, there are many varieties of agarwood trees in Hainan, including some rare varieties, and these rare varieties of worm-leaking agarwood are even rarer. In addition, Hainan worm-leaking agarwood is also loved by collectors for its unique fragrance and shape.

4. The value of worm-leaking agarwood Worm-leaking agarwood not only has extremely high artistic value, but also has certain medicinal value. In traditional Chinese medicine, agarwood is believed to have the effects of promoting qi and relieving pain, warming the middle and stopping vomiting, and promoting digestion.

Agarwood powder has many functions. It is not only a spice, but also has medicinal value. Agarwood powder can be made into incense. During the burning process, it releases a strong fragrance, which can eliminate viruses and bacteria in the air and remove odors in the air. It can not only purify the environment, but also calm the nerves, relieve tension, and make people fall asleep quickly. Drinking tea made from agarwood powder can also have the effect of refreshing the mind. Long-term drinking can also nourish the body and mind and prolong life.
